Winter is Planning Time

Welcome to Twenty-O-Two! It looks like 2002 will shape up to be a busy year in the liner business. If you are planning projects, it would be wise to start early to get in the schedule to get your liner when you need it.

Back on August 23, 2001 Fred Rohe presented a half-day program on Constructing with PVC Geomembranes to a group of Natural Resources Conservation Service engineers at the NRCS training center in Fort Worth, Texas. This presentation was part of a weeklong geosynthetics training program prepared by Mr. Wayne Youngblood of GeoTesting Express of Texas.

Fred Rohe will be in Texas again for two weeks in mid February, first attending the National Roofing Contractors Association convention in San Antonio, then visiting Austin to assist with PVC thermal welding research for the PVC Geomembrane Institute being done at TRI / Environmental, Inc.

If your company is interested in PVC information or a PVC presentation in Texas during this period, please contact EPI.

Tammy Albright, our Accounting and Customer Service specialist is in Florida this week visiting EPI dealers and enjoying a break from the cold winter weather in Mancelona.

Dan Rohe is busy updating the EPI www.geomembrane.com website. A new look, new navigation tools, and easier to find information on PVC geomembrane liners are all available at our award winning website. Be sure to visit and tell us what you think of our new look.

If you have questions on PVC geomembrane liners or comments on our news letter, please contact us toll free at 1-800-OK-LINER or click on this paragraph to send us an email.
