Meet Miss Polly Vinyl

Environmental Protection, Inc. is pleased to introduce you to Miss Polly Vinyl. As our new spokesperson, Polly will be supplying you with new, up to date information on PVC products available from EPI. Look for her in various technical publications, and watch for her new information pages on our web site.

Polly was first spotted at Geo 2003 in Atlanta, and Geotechnical Fabrics Report was her first public appearance. Polly will be conducting interviews throughout the coming year and will be reporting to you on various topics. For her next scheduled appearance in GFR, she will be interviewing one of our technicians about air channel testing EPI's dual track thermal welded PVC field seams, in order to verify minimum peel strength for the full length of each and every seam.

Geo 2003 was a great opportunity to visit with many of our friends in the geosynthetic industry. Many of our contacts from around the world traveled to visit this trade show, including our colleagues Carlos Tchirpout from Filmtex, Jorge Reyes and Luis Paredes from IGS Chile.

While we were in Atlanta, Dan, Pat & Fred also spent 3 days at the Golf Course Superintendents Association of America trade show. If you didn't get your PVC coaster when you

passed by our booth, then we just weren't trying! If we missed you, just give us a call and we'll be glad to send you one FREE. If you are working at remodeling a course or if you need any additional info on PVC durability, welding, installation, or a quote, just call Dan or Pat toll free...
